Tejas Dixit

Python Software Engineer | Workflow Automation | Flask, Data Analysis, SEO Systems
Pune Division, Maharashtra, India

Summary

I am a Python Software Engineer with 2+ years of experience building automation tools, backend systems, and data-driven solutions—primarily in media and content platforms.

At Media Vidya, I designed and developed internal automation tools using Python and Flask to eliminate repetitive editorial workflows. I also built an automated newsletter generation system that improved publishing efficiency, accuracy, and delivery consistency. My work included maintaining high-traffic websites, performing data cleaning and analysis for SEO optimization, and translating editorial and marketing requirements into scalable technical solutions.

I have hands-on experience with Python, Flask, FastAPI, SQL, Pandas, NumPy, and REST APIs. I am comfortable working in Linux environments and follow clean code, separation of concerns, and maintainable architecture principles.

I am actively looking for backend, automation, or data-oriented roles where I can build reliable systems, improve operational efficiency, and work on real-world problems.

Experience

Media Vidya
Python Engineer
January 2024 - Present (2 years 5 months)
Pune, Maharashtra, India

Developed internal automation tools using Python and Flask to streamline repetitive editorial workflows and reduce manual effort

Built an automated newsletter generation system, improving publishing efficiency, accuracy, and content consistency
